IBM's 360 and Early 370 Systems (History of Computing) Emerson W. Pugh, Lyle R. Johnson, John H. Palmer

No new product offering has had greater impact on the computer industry than the IBM System/360. IBM's 360 and Early 370 Systems describes the creation of this remarkable system and the developments it spawned, including its successor, System/370. The authors tell how System/360's widely-copied architecture came into being and how IBM failed in an effort to replace it ten years later with a bold development effort called FS, the Future System. Along the way they detail the development of many computer innovations still in use, among them semiconductor memories, the cache, floppy disks, and Winchester disk files. They conclude by looking at issues involved in managing research and development and striving for product leadership. While numerous anecdotal and fragmentary accounts of System/360 and System/370 development exist, this is the first comprehensive account, a result of research into IBM records, published reports, and interviews with over a hundred participants. Covering the period from about 1960 to 1975, it highlights such important topics as the gamble on hybrid circuits, conception and achievement of a unified product line, memory and storage developments, software support, unique problems at the high end of the line, monolithic integrated circuit developments, and the trend toward terminal-oriented systems. System/360 was developed during the transition from discrete transistors to integrated circuits at the crucial time when the major source of IBM's revenue was changed from punched-card equipment to electronic computer systems. As the authors point out, the key to the system's success was compatibility among its many models. So important was this to customers that System/370 and its successors have remained compatible with System/360. Many companies in fact chose to develop and market their own 360-370 compatible systems. System/360 also spawned an entire industry dedicated to making plug-compatible products for attachment to it. The authors, all affiliated with IBM Research, are coauthors of IBM's Early Computers, a critically acclaimed technical history covering the period before 1960.

From reader reviews:

Wendell Darnell:

Why don't make it to become your habit? Right now, try to prepare your time to do the important behave, like looking for your favorite book and reading a reserve. Beside you can solve your condition; you can add your knowledge by the guide entitled IBM's 360 and Early 370 Systems (History of Computing). Try to the actual book IBM's 360 and Early 370 Systems (History of Computing) as your friend. It means that it can being your friend when you truly feel alone and beside associated with course make you smarter than before. Yeah, it is very fortunated for yourself. The book makes you considerably more confidence because you can know anything by the book. So , we should make new experience along with knowledge with this book.

Brian Mejia:

Your reading sixth sense will not betray an individual, why because this IBM's 360 and Early 370 Systems (History of Computing) reserve written by well-known writer we are excited for well how to make book that could be understand by anyone who have read the book. Written in good manner for you, dripping every ideas and publishing skill only for eliminate your personal hunger then you still question IBM's 360 and Early 370 Systems (History of Computing) as good book not merely by the cover but also through the content. This is one reserve that can break don't determine book by its handle, so do you still needing an additional sixth sense to pick this kind of!? Oh come on your examining sixth sense already said so why you have to listening to a different sixth sense.

Dale Moore:

Is it anyone who having spare time in that case spend it whole day by means of watching television programs or just telling lies on the bed? Do you need something totally new? This IBM's 360 and Early 370 Systems (History of Computing) can be the solution, oh how comes? A fresh book you know. You are consequently out of date, spending your time by reading in this new era is common not a geek activity. So what these ebooks have than the others?

Sherri Ellison:

A lot of e-book has printed but it differs from the others. You can get it by online on social media. You can choose the most effective book for you, science, comedian, novel, or whatever through searching from it. It is known as of book IBM's 360 and Early 370 Systems (History of Computing). You can add your knowledge by it. Without making the printed book, it could possibly add your knowledge and make you actually happier to read. It is most crucial that, you must aware about e-book. It can bring you from one destination for a other place.
