Ning Xi, King Lai

Nano Optoelectronic Sensors and Devices: Nanophotonics from Design to Manufacturing (Micro and Nano Technologies) Ning Xi, King Lai

Nanophotonics has emerged as a major technology and applications domain, exploiting the interaction of light-emitting and light-sensing nanostructured materials. These devices are lightweight, highly efficient, low on power consumption, and are cost effective to produce. The authors of this book have been involved in pioneering work in manufacturing photonic devices from carbon nanotube (CNT) nanowires and provide a series of practical guidelines for their design and manufacture, using processes such as nano-robotic manipulation and assembly methods. They also introduce the design and operational principles of opto-electrical sensing devices at the nano scale. Thermal annealing and packaging processes are also covered, as key elements in a scalable manufacturing process. Examples of applications of different nanowire based photonic devices are presented. These include applications in the fields of electronics (e.g. FET, CNT Schottky diode) and solar energy.

- Discusses opto-electronic nanomaterials, characterization and properties from an engineering perspective, enabling the commercialization of key emerging technologies
- Provides scalable techniques for nanowire structure growth, manipulation and assembly (i.e. synthesis)
- Explores key application areas such as sensing, electronics and solar energy

From reader reviews:

Jean Spence:

Information is provisions for anyone to get better life, information presently can get by anyone with everywhere. The information can be a expertise or any news even restricted. What people must be consider if those information which is in the former life are hard to be find than now is taking seriously which one is acceptable to believe or which one the actual resource are convinced. If you receive the unstable resource then you get it as your main information it will have huge disadvantage for you. All those possibilities will not happen with you if you take Nano Optoelectronic Sensors and Devices: Nanophotonics from Design to Manufacturing (Micro and Nano Technologies) as your daily resource information.

Debra Lovern:

Do you have something that you prefer such as book? The publication lovers usually prefer to opt for book like comic, short story and the biggest the first is novel. Now, why not seeking Nano Optoelectronic Sensors and Devices: Nanophotonics from Design to Manufacturing (Micro and Nano Technologies) that give your enjoyment preference will be satisfied by reading this book. Reading practice all over the world can be said as the opportunity for people to know world a great deal better then how they react to the world. It can't be claimed constantly that reading routine only for the geeky man but for all of you who wants to become success person. So , for all you who want to start studying as your good habit, you can pick Nano Optoelectronic Sensors and Devices: Nanophotonics from Design to Manufacturing (Micro and Nano Technologies) become your personal starter.

Jerald Higgins:

Don't be worry for anyone who is afraid that this book will certainly filled the space in your house, you can have it in e-book means, more simple and reachable. This kind of Nano Optoelectronic Sensors and Devices: Nanophotonics from Design to Manufacturing (Micro and Nano Technologies) can give you a lot of close friends because by you investigating this one book you have issue that they don't and make anyone more like an interesting person. This particular book can be one of a step for you to get success. This e-book offer you information that perhaps your friend doesn't learn, by knowing more than other make you to be great individuals. So , why hesitate? Let's have Nano Optoelectronic Sensors and Devices: Nanophotonics from Design to Manufacturing (Micro and Nano Technologies).

Cindy Coleman:

What is your hobby? Have you heard which question when you got pupils? We believe that that concern was given by teacher to their students. Many kinds of hobby, Every individual has different hobby. And you also know that little person just like reading or as studying become their hobby. You should know that reading is very important as well as book as to be the factor. Book is important thing to incorporate you knowledge, except your teacher or lecturer. You see good news or update about something by book. Different categories

of books that can you take to be your object. One of them is Nano Optoelectronic Sensors and Devices: Nanophotonics from Design to Manufacturing (Micro and Nano Technologies).
