## **Surgery of the spine and spinal cord,** Charles Harrison Frazier

This historic book may have numerous typos and missing text. Purchasers can usually download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1918 edition. Excerpt: ...Only a short time ago, the ability to localize tumors was so limited that the operation was undertaken with apprehension and uncertainty, while at the present time operation may be performed, with a reasonable certainty of finding the tumor and, in many instances, of removing it. Until very recently, the attention given operable conditions of the brain, especially tumors, was quite out of proportion to that devoted to corresponding lesions of the cord. Experience is proving that the cord is more favorable for surgical interference, the conditions to be relieved quite as distressing and the prospect of relief greater, since a larger proportion of spinal tumors are operable. Spinal tumors are more rare than those of the brain, as shown by Schlesinger's classical record of the findings at 35,000 autopsies, where the ratio of tumors of the cord to those of the brain was about 1 to 6, but this fact certainly should not deter us from furthering the development of spinal cord surgery. Even since the new era began in 1913, interest in spinal tumors has been more or less vacillating, but stimulated by the progress in spinal localization, through the researches of Sherrington, Head, Déjerine and others, a new enthusiasm has been awakened during the past decade. The relation between the various cord-segments and their roots to the cutaneous segments on the one hand, and their muscular terminations on the other, is now so definitely established that we are able to draw fairly definite conclusions as to the location of the lesion. But a knowledge of the processes of degeneration of nervous tissue, of the exact course and relation of the conducting tracts and of the location of the various reflex arcs and automatic centers is also essential...
